

# Comenius Cycling Poll

*European School of Munich*

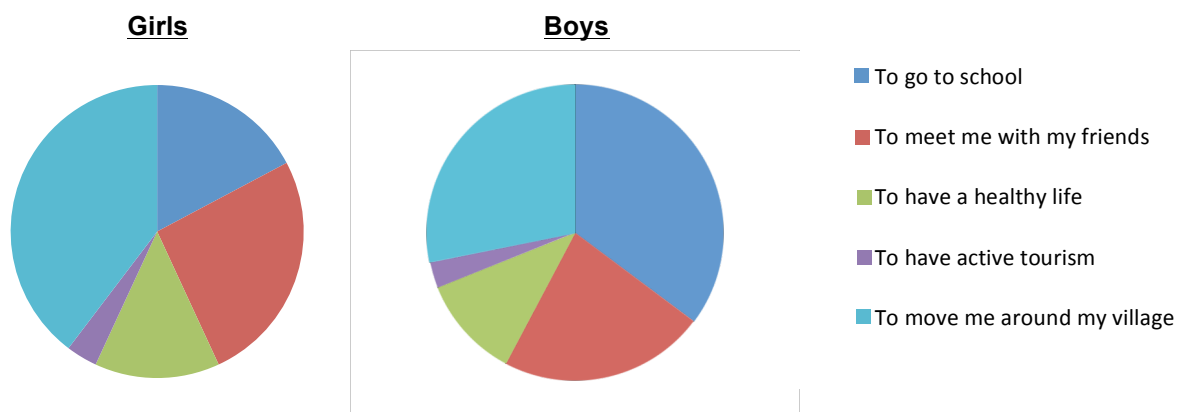

---

To do this poll, we asked 100 people, 50 girls and 50 boys.

The first question was: In which situation do you use your bike, principally?

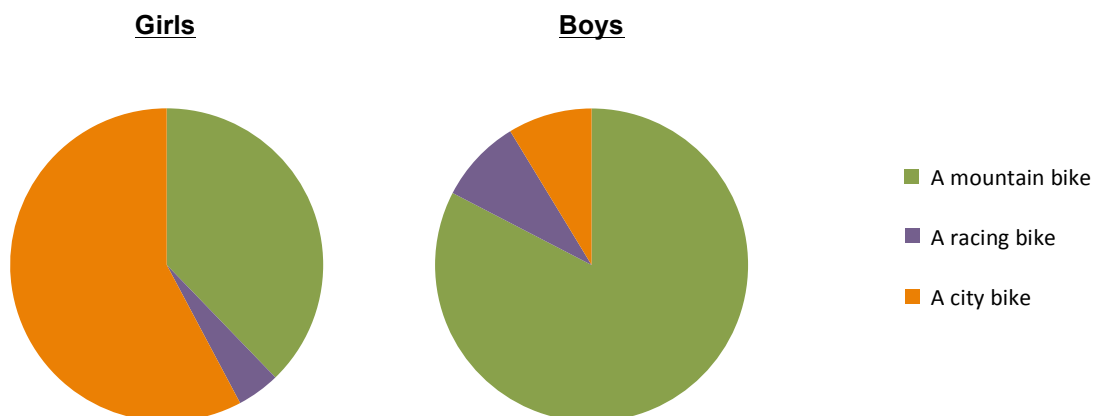

The most answered that they use their bike to move them around their village (43%), 35% to go to school. The girls principally use it to move around their village, the boys to go to school.

## In which situation do you use your bike, principally?

Second, we asked what type of bike the students have: the most of the girls answered that they have a city bike, and many boys have mountain bikes. Only 4% have racing bikes.

## What type of bike do you have?

In our school, nearly all students have done activities with bike at school, and only 10% don't know the safety regulations, but 85 % don't wear a helmet!

They're only 4 of 100 people who don't have special places in their city to park bikes, and only 5 don't have bicycles paths in their city.

We also asked how many bikes they have in their family: 60% have more than 3 ! 15% of these people use their bike every day, 40% often use their bike, and other 40% use it sometimes. The rest never or nearly never use their bike.

The most students have a bike because they like cycling (more than 70%).
